1	<b>Ethics Protocols and Ethics Committees</b> Dan Remenyi, Ban Van Den Assem & Nicola Swan 978-1-906638-99-3 £15	<p>Conducting research to high ethical standards is of great importance to the student and the university. Having an Ethics Protocol is the way of ensuring such standards can be met. Researching with the use of an approved Ethics Protocol also affords protection to the student.</p> <p>The book provides background on the issue of research ethics to help students and faculty have a greater understanding of the motivations behind the requirements to write an application to the Ethics Committee for the approval of an Ethics Protocol. The process of ethics approval and the function of the Ethics Committee are addressed along with how to cope with amendments to an Ethics Protocol.</p>	
2	<b>Realising Benefits from Government ICT Investment - a fool's errand?</b> Stephen Jenner 978-1-906638-26-9 £19	<p>"Jenner provides very credible guidance and methods on ICT project value realization in the public sector. This book is timely, practical and a very good primer on contemporary "best practice" thinking in both the public and for-profit sectors. The big question is: will public sector managers and executives have the "will" to put the book's prescriptions and methods into everyday practice with ICT Projects? The value of taxpayer services and contributions depends on their response." Donald Marchand, Professor of Strategy Execution and Information Management, IMD.</p>	
3	<b>Strategy-Technology Alignment: Deriving Business Value form ICT Projects</b> Paul Griffiths 978-1-908272-11-9 £15	<p>This book addresses the issues of how to deliver significant improvements in corporate performance through the use of ICT and it offers different models which can be of assistance to organisational leaders in this respect. These models are brought to life by analysing a series of real life case studies encompassing both successes and failures in the adoption of ICT, from which deep insights on how to apply this technology for competitive advantage are extracted.</p>	
4	<b>Field Methods for Academic Research: Interviews, Focus Groups and Questionnaires</b> Dan Remenyi 978-1-906638-96-2 £15	<p>Interviews, focus groups and questionnaires are everyday tools of the academic researcher in business and management studies. Most research degrees and many academic peer reviewed journal papers have employed one or more of these techniques. Ironically the knowledge and skills required to use these tools are not often well taught and the books available on these topics can be daunting. This highly accessible book addresses these three field methods and explains how they may be employed to good effect. The book also provides examples or research protocols, letters and checklists which are of direct use to researchers using these methods.</p>	
5	<b>Managing Risks of ICT Projects</b> Shaun Pather, Brendan Remenyi & Dan Remenyi 978-1-906638-86-3 £15	<p>One of the foremost challenges faced by all Information and Communication Technology (ICT) professionals is how to identify and manage the risks which are inherent in ICT projects. This book addresses these issues and provides insight into the management of ICT project risks. In general, ICT risk management has not been well understood and is thus one of the major causes of ICT project failure. Having explained the risks which need to be addressed, the book then goes on to provide an approach to risk management which will substantially reduce both the likelihood and the consequent impact of risks should they occur. The risk management approaches described in this book are relevant to both large- and small-scale ICT projects.</p>	

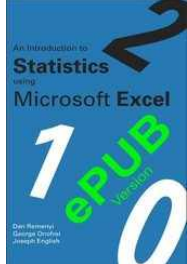

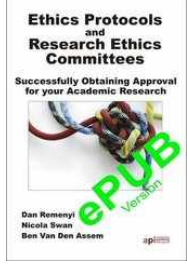

6	<b>Introduction to Statistics using Microsoft Excel</b> Dan Remenyi, George Onofrei & Joseph English 978-1-906638-55-9 £19	This is an unusual statistics book in that it contains very few mathematical formulae. This book explains the statistical concepts and then uses Microsoft Excel functions to illustrate how to get results using the appropriate techniques which will help researchers directly with their research. To facilitate learning the book uses lots of examples and because statistics is one of those subjects which is really only ever understood after a considerable amount of practice, data files have been made available on the web for readers' use.	
7	<b>Research Supervision: for Supervisors and their Students</b> Dan Remenyi & Arthur Money 978-1-906638-55-9 £25	This book has served as a practical guide for many PhD candidates throughout the world. It discusses in detail how masters and doctoral degrees are evaluated and gives tips on how to make sure that the examiners will be satisfied both by the dissertation and also during the viva	
8	<b>Leading Issues in Innovation Research</b> Daniele Chauvel 978-1-908272-24-9 £19	Innovation is one of the main drivers of 21st century business but traditionally it has not been given the amount of attention by academic research which it deserves. Innovation was for many years treated as a subsection of economic theory and was therefore largely dealt with in rather abstract terms. Business and management studies did not closely engage in how innovation can be encouraged and managed and harvested. However this is changing and more research is being conducted on this topic than ever before. This book is intended to deal with and scrutinize issues such as developing the right innovative capabilities, how to design for strategic innovation, creativity and discovery: moving beyond market equilibrium, to mention only a few of the topics discussed. This book has been compiled by Professor Danièle Chauvel from SKEMA, Sophia Antipolis, France who is an active researcher and teacher in this field.	
9	<b>Leading Issues in Games Based Learning Research</b> Thomas Connolly 978-1-908272-25-6 £19	<p>It has been said that the future will never be the same again, which is undoubtedly true, as is the statement that learning will never be the same again. Many of the old rules of learning are being swept away and it is increasingly realised that knowledge of "fact" is less important than understanding of situations. It is now well established that understanding can be facilitated by simulation, which is one of the principles on which games-based learning is founded.</p> <p>With the power available through ICT entirely new games are possible that have a much richer and more engaging potential for learners. This is transforming learning and opening up new avenues for both learners and those who are helping them learn. This book represents some of the leading edge thinking in this field and is highly recommended to academics and training practitioners.</p>	
10	<b>Leading issues in Business Research Methods</b> Antony Bryant 978-1-906638-87-0 £19	Published by Academic-Publishing International in 2011. This is a collection of 11 important Research Methodology Papers which will be of particular value to those who have a dissertation to write be it for an undergraduate degree, for a masters or even a doctorate. In addition the book has much to offer academic supervisors. The papers here are reproduced from those published in the Electronic Journal of Business Research Methods ( <a href="http://www.ejbrm.com">www.ejbrm.com</a> ).	

11	<b>Leading Issues in Knowledge Management Research</b> Charles Depres 978-1-906638-88-7 £19	Knowledge management is one of the most enduring concepts aimed at how to improve management efficiency, effectiveness and competitive advantage. It was originally thought to be a fad, but instead of being of interest for 5 to 10 years like other fads it has been at least 20 years since it became an issue in modern times. Many researchers now believe that it is an important academic field of study which is essential to address from both a research point of view and a teaching perspective. For that reason we have compiled 10 leading edge research papers which address some of the most important issues in that field.	
12	<b>Leading Issues in e-Government Research</b> Les Worrall 978-1-906638-89-4 £19	e-Government with its potential to improve the efficiency and the effectiveness of the bureaucracy which manages our society remains one of the most important issue facing us today. This book is a collection of research papers which focus on leading edge issues in e-Government. The research reported here has been conducted in several countries by leading academics in the field. These papers were originally published in the Electronic Journal of e-Government.	
13	<b>Leading Issues in Information Warfare and Security Research</b> Julie Ryan 978-1-908272-08-9 £19	As virtually every aspect of society becomes increasingly dependent on information and communications technology, so our vulnerability to attacks on this technology increases. This is a major theme of this collection of leading edge research papers. At the same time there is another side to this issue, which is if the technology can be used against society by the purveyors of malware etc., then technology may also be used positively in the pursuit of society's objectives. Specific topics in the collection include Cryptography and Steganography, Cyber Antagonism, Information Sharing Between Government and Industry as a Weapon, Terrorist Use of the Internet, War and Ethics in Cyberspace to name just a few. This book includes leading contributions to research in this field from 9 different countries and an introduction to the subject by Professor Julie Ryan from George Washington University in the USA.	

## DVDs

DVD1	<b>Research Supervision for Supervisors and their Students – DVD</b> Dan Remenyi and Arthur Money £60	This DVD is for research supervisors and for their students. Based on the book of the same title (ACL, 2004, ISBN 0-9547096-0-8, see below), it explains how to assess if you are likely to be an effective supervisor and addresses how to identify 'good' research students. For research degree students it explains what can be expected from the supervisor.	
DVD2	<b>The Knowledge-Cafe Briefing: If only we knew what we know – DVD</b> David Gurteen and Dan Remenyi £60	Initially thought by many to be another short-lived management fad, the current interest in Knowledge Management has now been on the corporate agenda for over a decade. It is increasingly understood that those who can mobilise and focus their corporate knowledge have a distinct competitive advantage. Despite the acceptance of this idea the amount that has been achieved by Knowledge Management is highly variable as it is now clear that implementing Knowledge Management is not a trivial matter. Time and again we hear that Knowledge is still stuck in well protected corporate silos and sometime corporate executive are heard saying, If only we knew what we know!
